Portfolio

SUMMARY

Backend-focused Software Development Engineer with hands-on experience building REST APIs, full-stack applications, automated tests, and AI-powered software systems. Proficient in Python, JavaScript, TypeScript, Node.js, Express, FastAPI, SQL, and MongoDB. Experienced in API validation, authentication, database persistence, error handling, and end-to-end testing. Currently an SDE Intern at Logikality, translating business requirements into test scenarios and investigating application defects. Focused on building reliable, maintainable backend systems.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL

Backend Engineering: Node.js, Express.js, FastAPI, Flask, REST APIs, API Design, Request Validation, Authentication, Error Handling, Asynchronous Workflows

Databases: MongoDB, MongoDB Atlas, MySQL, SQLite, Data Modeling, Database Persistence

Testing and Quality: Playwright, Vitest, Supertest, API Testing, End-to-End Testing, Regression Testing, Test Automation, Debugging, Page Object Model

Tools and Deployment: Git, GitHub, Docker, Vercel, Render, VS Code, CI/CD Fundamentals

Additional Technologies: React, HTML, CSS, LLM APIs, RAG, Embeddings, Semantic Search

EXPERIENCE

SDE Intern May 2026 – Present

Logikality, Bengaluru

- Translate LogikIntake and Title Intelligence business requirements into testable scenarios and application workflow validations.
- Develop Playwright page objects and end-to-end test specifications to validate application behavior.
- Prepare document test datasets and investigate classification, page-stacking, and workflow defects.

PROJECTS

Trao – AI Interview Prep Kit GitHub

- Built and deployed a full-stack interview preparation platform using Node.js, Express, TypeScript, React, and MongoDB.
- Implemented REST APIs, authentication with bcrypt and revocable sessions, owner-scoped data access, schema validation, and structured error handling.
- Built a multi-step AI generation pipeline with model retries and fallback handling; added requirement coverage checks and schedule generation in application code rather than relying on LLM judgment. deployed the frontend on Vercel, API on Render, and persistence on MongoDB Atlas.

SniperThink – Real-Time Voice AI GitHub

- Developed a real-time voice assistant using Python, FastAPI, WebRTC, Silero VAD, and Faster-Whisper.
- Integrated LLM provider fallbacks and rule-based responses to improve resilience; reported response latency below 800 ms.

NeuroResearch – Autonomous AI Research Engine GitHub

- Built a modular research assistant using Python, Streamlit, RAG, FAISS, and LLM APIs to combine local document retrieval with live web intelligence.
- Implemented document parsing, text chunking, embedding-based semantic search, query routing, and source-attributed research responses.

EDUCATION

B.Tech in Computer Science and Engineering (AI & ML), VIT-AP University 2022 – 2026

CGPA: 8.45/10

Intermediate, Sri Chaitanya Junior College 2020 – 2022

Percentage: 90.7%

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 – Generative AI Certified Professional (Credential)

AI Coder: Complete Claude Code & Coding Agents Course – Udemy, June 2026

LEADERSHIP

Machine Learning Club Member, VIT-AP University 2023 – 2024

Supported technical workshops, peer learning sessions, and collaborative projects.
