KANITHI SATYA SATHVIK

AI Engineer | SDE Intern at Logikality

+91 9515136729 Bengaluru, India

kanithisathvik@gmail.com

LinkedIn | GitHub | LeetCode | Portfolio

Professional Summary

AI Engineer and Computer Science graduate with a focus on AI/ML, LLM applications, Retrieval-Augmented Generation (RAG), and AI product engineering. Experienced in building voice AI systems, text-to-SQL assistants, semantic search applications, and machine learning solutions. Currently working as an SDE Intern at Logikality, developing Playwright test automation, translating business rules into testable scenarios, and documenting reproducible defects. Interested in building reliable, measurable AI systems from prototype to production.

Technical Skills

Programming: Python, Java, SQL, JavaScript, TypeScript, HTML, CSS

LLM and NLP: RAG, Transformers, Hugging Face, Sentence Transformers, Embeddings, Semantic Search, Similarity Scoring, Prompt Engineering, LLM Agents, Multi-Agent Systems, Speech-to-Text, OpenAI API, Gemini, Groq, Ollama

Machine Learning: Classification, Regression, Feature Engineering, XGBoost, SVM, Random Forest, Deep Learning, Time-Series Forecasting, Reinforcement Learning, DQN, PPO, SARSA, Model Evaluation

Frameworks and Libraries: FastAPI, Flask, Streamlit, React, Node.js, Express, PyTorch, TensorFlow, scikit-learn, Pandas, NumPy, FAISS, ChromaDB, Plotly

Databases and Tools: MySQL, SQLite, Git, GitHub, VS Code, Jupyter Notebook, Power BI, WebRTC, Whisper

Testing and Development: Playwright, End-to-End Testing, Test Automation, REST APIs, Page Object Model (POM), Claude Code, AI-Assisted Development

Experience

SDE Intern May 2026 – Present

Logikality, Bengaluru

- Translate LogikIntake and Title Intelligence business rules into testable scenarios and QA workflows.
- Develop Playwright page objects and end-to-end test specifications for application workflows.
- Prepare document dataset packets for operator testing and validate classification and document-stacking behavior.
- Identify and document reproducible defects, including document classification, page stacking, and workflow issues.
- Contribute to QA strategy documentation, PRD clarifications, and CTO demo scenarios.

Projects

Trao – AI Interview Prep Kit GitHub Live

- Built and deployed a full-stack interview preparation platform using React, TypeScript, Node.js, Express, and MongoDB.
- Implemented authentication, persistent user-owned data, REST APIs, schema validation, and structured error handling.
- Developed automated tests using Vitest and Supertest; verified application workflows including editing, regeneration, persistence, and authentication.
- Deployed the frontend on Vercel and backend on Render, with MongoDB Atlas for persistence.

SniperThink Voice AI GitHub

- Built a real-time voice conversation system using WebRTC, Silero VAD, Faster-Whisper ASR, and an LLM fallback chain involving OpenAI, Ollama, and rule-based responses.
- Reported response latency below 800 ms, with fallback handling designed to improve availability during LLM provider failures.

CogniNest AI – Text-to-SQL Assistant GitHub

- Developed a natural-language-to-SQL assistant using Vanna 2.0 and FastAPI to help users query databases without writing SQL manually.
- Implemented SELECT-only query validation and chart generation with Plotly; achieved 19/20 passing test questions (95%).

TwinMind Pro – Live Meeting Copilot GitHub Live

- Built a meeting copilot combining Whisper Large V3 transcription with Llama 3.3 70B to generate contextual

suggestions during live conversations.
- Implemented chat and JSON export, with approximately three suggestions generated every 30 seconds.

AI Resume Screening System GitHub

- Developed an automated resume-screening application using TF-IDF and cosine similarity for job-description and resume matching.
- Evaluated the workflow on 200+ resumes and reported a 60% reduction in shortlisting time.

Insurance Risk Analytics

- Analyzed 1 million simulated insurance records using Python, Pandas, SQL, and Power BI to investigate policy risk and profitability.
- Used SQL queries and interactive visualizations to support data-driven analysis.

Heart Disease Prediction GitHub

- Built machine learning classifiers using healthcare data covering 1,000+ records and reported 90% accuracy.

AQI Forecasting GitHub

- Applied regression and time-series techniques to three years of air-quality data, reporting 85% forecasting accuracy.

Thyroid Disease Classification GitHub

- Trained and evaluated XGBoost and SVM models on 3,500+ records, reporting 92% classification accuracy.

Education

B.Tech in Computer Science and Engineering (AI & ML) 2022 – 2026
VIT-AP University
CGPA: 8.45/10

Intermediate 2020 – 2022
Sri Chaitanya Junior College, Gajuwaka
Percentage: 90.7%

Certifications

- Oracle Cloud Infrastructure 2025 – Generative AI Certified Professional (Certificate)
- Complete AI & Machine Learning, Data Science Bootcamp – Udemy, November 2025 (44 hours).
- AI Coder: Complete Claude Code & Coding Agents Course – Udemy, June 2026 (16.5 hours).

Leadership

Machine Learning Club Member 2023 – 2024
VIT-AP University

- Supported AI workshops, peer learning sessions, and collaborative mini-projects.
